**DETAILED ACTION**

***Specification***

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 21-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 21 contains limitations for a submarine fiber optic transmission network and limitations for a method for use in a submarine fiber optic transmission network. Claim which is intended to embrace both apparatus and method is precluded by language of 35 U.S.C. 101, which set forth statutory classes of invention in alternative only, and is also invalid under 35 U.S.C. 112, second paragraph, since claim which purports to be both apparatus and method is ambiguous and therefore does not particularly point out and distinctly claim subject matter of the invention. See *Ex parte Lyell*, 17 USPQ2d 1548 (Bd.PA&I. 1990).

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 13 is rejected under 35 U.S.C. 102(b) as being anticipated by Yamamoto et al. U.S. Patent no. 5,838,477.

Regarding claim 13, Yamamoto discloses in the background of the invention a submarine fiber optic transmission network including a single cable (col. 1, lines 6-7) with at least two pairs of fibers (see figure 13, for example, pair of fibers output from optical switch 6 and pair of fibers input to optical switch 7 at terminal B);

a branching unit 8 (see figures 12 and 13), the branching unit 8 of figure 12 being connected to terminal equipments (e.g., first submarine landing terminal equipment A, second submarine landing terminal equipment B, third submarine landing terminal equipment C of figure 12) by two cable sections (section branching to terminal B and section branching to terminal C) each having at least two pairs of fibers (section branching to terminal C having fiber pairs connected to optical couplers 5,9 and 7, 6 and section branching to terminal B having fiber pairs connected to optical switch 6, 7 and 6, 7), each branching unit (see figure 13) switching the fiber pairs of the single cable to two fiber pairs of two cable sections connected to it (for example, fiber that input to optical splitter 5 at station A is branching to optical switch 6 of station B and station C, likewise, fiber that input to optical switch 7 at station B is branching to optical coupler 9 of station B and station C, etc...) and branching unit providing protection mechanism by enabling switching of the fiber pairs of the single submarine cable to the fiber pairs of one of the two cable sections connected to the said branching unit (Figure 12; col. 1, lines 4-10, col. 2, lines 26-34).

Art Unit: 2633

5. Claims 14-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
